How to Measure for a Shower Curtain

Width

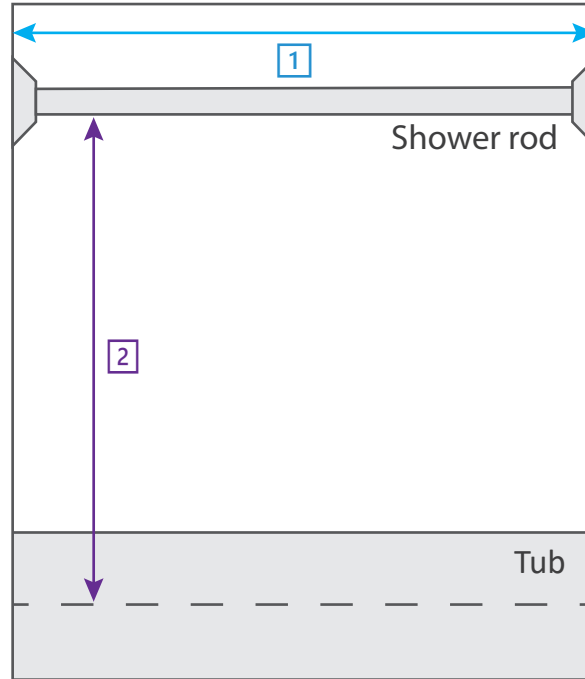

1 Measure the width of the rod and add 15% to 20% for fullness.

A standard tub is 60"W and uses a 72"W curtain. A standard stall is 28"W and uses a 36"W curtain.

Length

2 Measure from the bottom of the shower rod to the center of the tub (or wherever you want the curtain to fall).

Add 2" if selecting a Hang2it header curtain.
